

A Game-Changing Housing Solution for Africa is Launched

About the Product:

1. The Clip Plus housing solution is characterised by its very rapid erection and long life span.
2. Sustainability
3. The solution accommodates respective economic, geographical and social requirements
4. Solution uses locally available resources
5. The solution combines reinforced concrete foundations and walls with elastic plastic surface and poured roof anchors which guarantees maximum stability.

Johannesburg - The South African housing market will never be the same, after the launch of a housing solution that enables dynamic and lightening fast turn around at a time when it is most needed,

Clip - Plus Technology South Africa in partnership with Global Housing Holdings - South Africa and Global Housing Solutions - Austria, have unveiled a pre-fabricated building solution that is cost and time effective, durable and customisable for a variety of housing needs for South Africa and the continent.

The social impact is far reaching - the solution will finally provide the means to service the high demand for housing across Africa, providing much needed shelter and restoring the dignity of so many more.

The revolution however will be most visible within the build and construction industry, as the new innovative material will significantly shorten the turn around cycles, while elevating the quality standards of what is being delivered.

“As responsible corporate citizens, we believe technology and innovation have a role in emancipating humanity in the global information age.”

Some key advantages:

1. The Clip house PVC Shell is self-extinguishing- in the case of a fire, the shell melts instead of bursting into flames
2. The Clip House is earthquake, hurricane, bullet & fire proof. Durable, robust & maintenance free
3. Fast construction, simple & quick assembly.

The multinational partnership has already developed and piloted the first set of low cost, high quality homes in Alexandra township, Gauteng Province. The houses were erected and delivered, ready for occupation in less than 10 days! Now, the official unveiling of the housing project will take place at the Institute Status Acres Combined School in Germiston, Ekurhuleni Metropolitan Municipality on the 18th July 2016, Nelson Mandela Day.

The partnership has also donated a building towards the treatment and distribution of medication for HIV patients in Alexander; this is the Alexander Health Centre.

Through this project initiative, it is envisaged that the Clip House Technology will assist in not only providing affordable, sustainable low cost, high quality housing, but create permanent jobs as well as youth training & skills development opportunities for the build and construction environment.

The initiative is born out of a deep passion from the founders, to contribute technologically to the efforts of alleviating poverty, inequality and youth unemployment, not only in South Africa and the SADC but the continent as a whole.

According to Paul Langa, the Executive Chairman of Clip Plus Technology SA, this product has the potential to help reduce housing backlogs across governments on the continent, accelerate service delivery especially provision of public facilities such as early childhood development centres (ECD's), schools, clinics, hospitals, office buildings and public sanitation facilities as may be required.

“As responsible corporate citizens, we believe technology and innovation have a role in emancipating humanity in the global information age.” said Mr Langa.

The signing ceremony today confirms that the partnership commences production in South Africa, Mozambique & Zambia. As a result, the facilities will create not less than 1500 direct and indirect jobs in the build and construction environment.
